## Cheat sheet

Use this if you are stuck reading the stuff above, this will give you instructions, tips, and, if you read down enough, the answers.

1. You will have opened this document, and seen the 3 different blocks of code, and the 4 different cyphers. Familiarise yourself with these.
2. First, you start by using the 3<sup>rd</sup> cypher to decrypt the first message, using the symbols that match the letters to write out a phrase.
3. Then, start by slowly moving through the second block of text, there is a few different codes in it, so it may be best to print this out if it helps.
  - a. The first one uses the 1<sup>st</sup> cypher, and it works by taking the first symbol of each of the groups of three symbols and working out what they mean.
  - b. The second and third are much like the first, but they use the second and third characters and cyphers respectively.
  - c. The fourth code is a little different, it takes each large block of text independently, and uses the fourth cypher to replace the whole groups of symbols with a single letter, character or punctuation mark.
4. Finally, the bit at the bottom of the text uses the second cypher and is much like the one in the second step.
