Cheat sheet

Use this if you are stuck reading the stuff above, this will give you instructions, tips, and, if you read down enough, the answers.

- 1. You will have opened this document, and seen the 3 different blocks of code, and the 4 different cyphers. Familiarise yourself with these.
- 2. First, you start by using the 3rd cypher to decrypt the first message, using the symbols that match the letters to write out a phrase.
- 3. Then, start by slowly moving through the second block of text, there is a few different codes in it, so it may be best to print this out if it helps.
 - a. The first one uses the 1st cypher, and it works by taking the first symbol of each of the groups of three symbols and working out what they mean.
 - b. The second and third are much like the first, but they use the second and third characters and cyphers respectively.
 - c. The fourth code is a little different, it takes each large block of text independently, and uses the fourth cypher to replace the whole groups of symbols with a single letter, character or punctuation mark.
- 4. Finally, the bit at the bottom of the text uses the second cypher and is much like the one in the second step.

Cheat Sheet Code 1: The ball is round a game lasts ninety minutes everything else is pure theory. Code 2: A girl abandoned. a store robbed. a gun is fired. Code 3: The girl takes charge, a bank is robbed, a man hit. Code 4: The father leaves. the girl gambles. At last they win. Code 5: Don't worry. Everything's okay. Come on. What's in the bag

Code 5:

After the game is before the game.
